hypothetical protein CT839 - Chlamydia trachomatis (serotype D, strain UW3/Cx)
C;Species: Chlamydia trachomatis
C;Decies: Chlamydia trachomatis
C;Decies: 08-001-1998
#sequence_revision 13-Sep-1998 #text_change 08-001-1999
C;Accession: G71465

genome polyprotein - Murray Valley encephalitis virus (strain Australia)
N;Contains: capsid protein; envelope protein; membrane protein; nonstructural protein |
N;Contains: capsid protein NS4b; nonstructural protein NS5
C;Species: Murray Valley encephalitis virus
C;Date: 30-Jun-1988 #sequence_revision 17-Feb-1994 #text_change 19-Jan-2001
C;Accession: A24635; A60288
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       C;Species: Neisseria meningitidis

Tumor necrosis factor ligand superfamily member 10 (TNF-related apoptosis inducing ligand) (TRAIL protein)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     SUBUNIT: Homotrimer (By similarity).
SUBCELLULAR LOCATION: Type II membrane protein (Potential).
TISSUE SPECIFICITY: WIDESPREAD.
SIMILARITY: Belongs to the tumor necrosis factor family.
                                                                                                                                                                                                                                                                                                                        ö

Complete genome sequence of the ammonia-oxidizing bacterium and
plaste chemolithroautotroph Nitrosomonas europaea.";
T. Bacteriol. 185:2759-2773 (2003).
T. FUNCTION: Involved in the attachment of lipoyl groups to proteins,
Dy creating an amide linkage that joins the free carboxyl group of
Dy creating an amide linkage that joins the free carboxyl group of
Inpoic acid to the epsilon-amino group of a specific lysine
residue in lipoylated proteins (By similarity).
T. PATHWAY: Liposynthesis.
T. STMILARITY: Belongs to the lipB family.
Eukaryota; Alveolata; Apicomplexa; Coccidia; Eimeriida; Sarcocystidae;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         IS-WAR-2004 (Rel. 43, Created)

               human and mouse cDNA sequences.",

Proc. Natl. Acad. Sci. U.S.A. 99:16899-16903(2002).

-I- NATL Acad. Sci. U.S.A. 99:16899-16903(2002).

-I- FUNCTION: Inhibits DNA replication by preventing the incorporation of MCM complex into prereplication complex (pre-RC). It is degraded during the mitotic phase of the cell cycle. Its destruction at the metaphase-anaphase transition permits replication in the succeeding cell cycle.

-I- DEVELOPMENTAL STAGE: Absent during G1 phase, accumulates during S, G2, and M phases, and disappears at the time of the metaphase-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                MEDLINE=91110576; PubMed=1703303; Schanberg L.E., Kaufman R.E.; Schanberg L.E., Fleenor D.E., Kurtzberg J., Haynes B.F., Kaufman R.E.; "Isolation and characterization of the genomic human CD7 gene: structural similarity with the murine Thy-1 gene."; proc.
